APC - IS CRAP

September 30, 2019

Verified Purchase

I have been buying APC battery backup units for a long time, The units are , I now understand, good to begin with, BUT, in the long run, they fail, and fail miserably. This one, we never needed it to work, except till a month ago, when it just failed. I checked, and figured out that even if there is no battery warning, and the battery says, it's at 100%, actually nothing is right with the unit. I ordered new batteries, and opened the unit to replace them. The inside was just HOTT. Two days of cooling later, batteries are still too swollen to remove, the unit is now worthless. My main issue, is why this unit did not sound an alarm and let us know to replace the batteries when they needed be replaced, instead it caused a very bad situation, where this became a hazard instead of help. Lots of swollen battery issues are reported online, with APC. Is APC doing something about it?

And when the batteries go out?

February 16, 2019

Verified Purchase

Well, my batteries died. I have no argument with how long they lasted: 10 years. It's the replacement problem that has me fit to be tied. The cost is normally around \$300-\$350 US. Well, that was a bit steep for me so I went looking for a bargain. I thought I'd found one, and purchased it for \$180 US. I got it back home and found that there are different connection shapes for the same model of battery!! The one I purchased is slightly larger than mine. It won't fit. That's the first I've run across this problem in 40 years of being a Computer Consultant!!

Power To Spare

December 15, 2015

Verified Purchase

Just put everything all together (hooked up) and this power backup is great! Everything on runs at 53% load (48" 4K TV, sound bar, two 30" monitors, computer with 1000 watt power supply, computer sound system, halogen lamp (500 watts), router, modem, and a various sundry of other things).

I replaced my old APC Smart-Ups 2200XL after many years.

Big, heavy, powerful, and very quiet.

July 21, 2011

Verified Purchase

This UPS is a beast. It was shipped via freight truck (not regular UPS/FedEx courier), which took a little longer than usual Amazon Prime speed--but I still received it in 3 business days from ordering. The UPS is shipped on a small pallet and shipping weight is a solid 125 lbs; the UPS without the pallet and packaging is 112 lbs, so plan accordingly. I estimate that with the batteries removed, the unit weighs about 55 lbs (I took the batteries out to move it up a few flights of stairs).

You should also beware that this UPS ships with a 20 amp plug with a horizontal spade (a NEMA 5-20P)--you cannot plug this UPS into a regular outlet (which is a NEMA 5-15R). If you have a regular 15 amp circuit, look at the 1500 VA version of this UPS (which is also a lot smaller and only weighs 58 lbs). [Update: The APC documentation, if I understand it correctly, indicates it is "safe" to use an adapter to plug into a 15-amp socket. If you want to do this, check the documentation and see if you believe this to be true.]

My biggest concern about buying this UPS was noise. The specs say 45 db at 1 meter, which didn't seem too loud, but I had read a lot of complaints about the smaller version of this unit being very noisy. I am very happy

Clean consistent power

June 8, 2013

Verified Purchase

Using this to provide clean constant voltage to a Parata Max drug dispensing robot in a high volume pharmacy. The buildings electrical wiring infrastructure was a disaster and outdated which caused daily power fluctuations and power outages. FPL and certified electrician both determined it was an internal wiring issue. This unit was suggested by several different people (including my IT director and Parata support) and problem solved (for now). Only time will tell if this was a long term solution or not. So far so good and its been 60+ days.

FYI...

APC SMT UPS Cooling Fan Noise

October 18, 2013

Verified Purchase

September 2013

My APC SMT2200 120V LCD UPS System is used in my Satellite AV system to clean up line noise and voltage fluctuations and to provide power back-up when I am recording TV programs and movies. I have been using APC UPS systems for many years and they have been quite reliable. This particular unit replaces a smaller APC 1500VA UPS that failed after several years due to internal component failure. I would have repaired it if I had been able to obtain the circuit schematics and parts list from APC. The cooling fan noise is a minor irritant because the UPS is behind a large AV cabinet. I would have given the SMT2200 five stars if the fan was quieter and I was able to purchase a maintenance manual from the manufacturer.

Love It! Working Great

February 8, 2018

Verified Purchase

Love It! Working Great! Had a winter storm with ice on the power lines in January and it kept my computer system and 2 monitors running for over 3 hours allowing me to keep working and close out all files.
